## Preparation and Procedure

Prepare and drape the surgical area in usual manner. Apply the LiNA SeaStar according to the following guidelines:

1. Place the LiNA SeaStar around the initial incision and insert the LiNA Skin Hook in directly opposing quadrants with equal tension.

2. As dissection progress, move the position of the LiNA Skin Hook into the deeper layers of fascia. You may then add new hooks or reposition those already in place to achieve full balanced retraction from any angle.

3. To ease closing, maintain constant opposing tension.

The LiNA SeaStar and LiNA Skin Hook is a complete system for retracting both delicate and solid tissue. The flexible design of the system allows easy adjustment and repositioning of the LiNA SeaStar during the surgical procedures and provides optimal exposure of the surgical site.

**Safe**

Self-retaining

- The LiNA SeaStar and LiNA Skin Hook is a self-retaining system freeing the hands of the surgeon and the surgical assistant to handle other tasks in the OR.

**Functional**

Broad range of LiNA SeaStar retractor rings

- **LiNA SeaStar**
  The LiNA SeaStar is provided in a broad range of shapes and sizes which can easily be adjusted to fit various anatomical areas, thereby facilitating different surgical applications e.g. vaginal and rectal surgery.

- **LiNA Skin Hook**
  By securing the LiNA Skin Hook on to the LiNA SeaStar the exposure of the incision is increased. The flexible and elastic hook can be adjusted during the procedure to create optimum tension. The LiNA Skin Hook is available with 3 different stainless steel hooks.

The LiNA SeaStar is available both as single use (S) and reusable (R), except for the squared model which can only be ordered as single use.
